

QUICK CHANGE FILTER SYSTEM

What's in the box

Filter details

NANO POSITIVE FILTER

Combination electro-spinning product with "Electro-Positive Membrane" can remove 99.9% of bacteria and virus.

Product name: Nano Positive Filter
The external appearance: P.P (Korea)
Material: Positive Membrane, Non-woven fabric
Country of origin: Korea

Maximum Water Purification : 5L/min
Maximum allowable pressure : 7kgf/cm²
Maximum operating temperature: 45°C
Date of Manufacture: Separately marked
Exchange cycle: About 18 months

Precautions for Filter Replacement

1. Turn off the raw water supply valve
2. Make sure that the connection of the tubing wire is connected in the direction of flow (If the tubing wire is scratched or damaged, replace it with a new one)
3. When combining the tubing wire with the fitting, push it toward the fitting
4. Supply raw water, turn it on, and check for leaks

POST-TREATMENT ACTIVATED CARBON BLOCK FILTER

Combines the filtration function of the block with the adsorption function of activated carbon to effectively remove heavy metals such as residual chlorine, volatile organic compounds, trihalomethane, mercury, lead, and cadmium.

Product name: Post-treatment activated carbon block filter
The external appearance: P.P (Korea)
Material: Compressed activated carbon
Country of origin: Korea

Maximum Water Purification : 5L/min
Maximum allowable pressure : 7kgf/cm²
Maximum operating temperature: 45°C
Date of Manufacture: Separately marked
Exchange cycle: About 6 to 12 months

Precautions for Filter Replacement

1. Turn off the raw water supply valve
2. Make sure that the connection of the tubing wire is connected in the direction of flow (If the tubing wire is scratched or damaged, replace it with a new one)
3. When combining the tubing wire with the fitting, push it toward the fitting
4. Supply raw water, turn it on, and check for leaks
